DETAILED ACTION

Specification

1. Specification page 9, line 18, "boundary 310" should be replaced by "boundary 330".
2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: "each of the received primary period and primary width updates occurs across **or within** a PWM signal boundary of a current PWM signal being generated" does not have proper antecedent in the specification, as recited in claims 2 and 27.

Claim Objections

3. Claims 3-13, 18-19, 23, 24, 27-3 are objected to because of the following informalities:

The dependency of claim 3 should be changed to "claim 2" as claim 1 is a canceled claim.

Claim 4, line 4, after machine, "is" needs to be inserted.

Claim 6, line before last, "a width" should be "the width so as to make use of antecedent in claim 3, line 16.

Claim 7, line before last, "a" should be "the".

Claim 8, line 7, before "to", "is" should be inserted. the same comment applies to line 9.

Claim 9, five lines before last, before "to", "is" should be inserted.

Claim 18, line 1, "an" should be deleted.

Claim 23 recites a series of "means". in order for the claim to be treated as a means plus function type claims, the claim should be amended to replaced "a means to" by "means for; line 4, shouldn't " the microcontroller " be replaced by "a microcontroller core" ? the same comment applies to line 6 and line 10 and claim 24; 3 lines before the last, "an expired" should be "said expired", in both occurrences, so as to make use of antecedent in lines 7-8.

Claim 24, "a PWM" should be "said PWM".

Claim 27, line 4, "can occur" should be replaced by "occurs".

Note that any claim whose base claim is rejected is likewise rejected.

Information Disclosure Statement

3. The information disclosure statement filed 6/27/05 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 3-8, 18-19, 21 and 22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3, line 16, "the width update counter signal" lacks of proper antecedent basis.

Claim 18, line 2, "the expired width value" lacks of proper antecedent basis.

Claim 21, line 3, "the received period and width value" lacks of proper antecedent basis;

Four lines before last, "the width write counter signal" lacks of proper antecedent basis.

Note that any claim whose base claim is rejected is likewise rejected.

6. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

7. Claims 2-8 and 27-31 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 2 recites that "each of the received primary period and primary width updates occurs across or within a PWM signal boundary of a current PWM signal being generated". However, the specification does not teach how to configure the apparatus/processor so that the primary period and primary width updates occurs only **across or within** a PWM signal of a current PWM signal being generated. Without that information, one will not be able to make and or use the invention as claimed. The same comment applies to claim 27 and each of the dependent claims.

Allowable Subject Matter

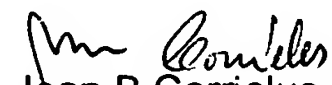

8. Claims 9-17, 23 and 24 are allowed. However, the claim must be amended if necessary to overcome any objection set forth above.

9. Claims 18, 19, 21 and 22 would be allowable if amended to overcome the 112 rejection sets forth above.
